ZERO TOLERANCE

Product Specifications:

Material: Silicone & ABS
Battery: Built-in Li battery
Voltage: 3.7V
Number of Vibrations: 3
User time: 50 - 70 Minutes
Sound Level: <65DB

CHARGING INSTRUCTIONS

This stroker arrives pre-charged with about 75% capacity, so it may be used immediately without charging first.

To charge, connect the USB plug into a power source and the DC charger end into the port at the top of the toy. Pull up silicone flap marked DC to expose the charging port. The toy needs to be in a horizontal position to charge. Please note that the charging port will not line up when the toy is in a vertical position. To line up the charging port with circular entrance, push the power button once to reset charging port. The inner ball will rotate to put the charging port into position. If the charging port is slightly off, a slight shake will move it into position.

Charge will take about 2.5 hours to complete.

The indicator light will flash while device is charging and turn off when toy is fully charged. There is no danger of battery damage by overcharging but it's recommended not to overcharge for long periods of time. Charge lasts for about 50 minutes of play time at the highest level of vibration and about 70 minutes at the lowest level.

This toy operates at a sound level of less than 65db with a rechargeable lithium battery at 3.7V.

INSTRUCTIONS FOR USE

This stroker has a 1-button control on its side near the top of the canister.

To turn toy on, press the button for at least 2 seconds. The light will turn on and stroker will begin gyrating at its first lowest frequency. Press the button again a single time for each new speed or function for a total of 3.

To turn toy off, press button for at least 2 seconds.
