

GLAMOUR GLASS RIBBED G-SPOT DILDO

This dildo is made of Borosilicate glass which is very strong, non-porous, hygienic and safe for the body. The dildo has soap bubble colours which gives it a glamorous look. The clever design features an angled tip that is perfect to easily reach the G-spot or P-spot. The nubs at the shaft add extra stimulation. For easy handling it has a pull ring at the base.

Glass is great for temperature play. Store the dildo in the fridge or put it in hot water before use and enjoy the tingling cold or exciting warm sensations. The glass material can be cleaned with soapy water, you don't need boiling water but it's very well possible if you prefer this. Don't worry about the colours of the toy, they won't wear off because they are not an external layer on the glass, but baked into the material, so they are IN the glass.

FEATURES

- Glass dildo
- For G-spot and P-spot
- Stimulating nubs
- Pull ring
- Perfect for temperature play
- Made of borosilicate glass, body safe and hygienic

Borosilicate glass is also called Hard Glass. It is made of silica and boron trioxide and much more resistant to thermal shock than common glass. Not only is borosilicate glass stronger, it is lighter than common glass too. This makes it very suitable for lots of products.
